As a website developer, I am naturally enthusiastic about staying abreast of the latest industry developments. Witnessing new trends emerge in the development process, there is a continuous need to enhance skills and abilities in analyzing requirements. This is particularly crucial for web designers. Currently, I am actively involved in the field as a website developer and designer. Looking ahead, my focus is on exploring how to integrate 3D elements into websites.

## Experience

### Freelance Website Developer

2019 - Now

- I work on creating a skilled and responsive website using ReactJS for the frontend and MySQL for the backend, ensuring that requests are processed as efficiently as possible
- Of course, with every client, I am frequently asked for information about implementing effective SEO for the website I am working on.
- But I also create interfaces that are responsive, efficient, and precise.

### Online Invitation Website

2023 - Now

- As a freelancer, I also seek sources of profit from online invitation websites.
- By using React JS as the frontend and also Javascript and MySQL as the backend
- The concept design for the company's website has been applied and used until now
- Apart from creating an interface that suits the client, I also strive to promote it.
- Because there was so much coding, I also reanalyzed it and made the website very light and comfortable to use
- And that's where my ability as a website designer lies – creating invitations with an appearance that is as attractive and creative as possible.

## Education

### SMA N 1 Tanjung Raya

2017 - 2019

### Pakuan University

2019 - Now
